# Nature Through A Lens

*An extension of "Wildlife through the eyes of young photographers"*

Nature is all around us. When we take a close look, it never fails to amaze us. **"Wildlife through the eyes of young photographers"** (page 12-13, *What's Up* February 2018) shows us what children are able to discover when observing nature closely through their camera lenses.

## INSTRUCTIONS

1. The table below lists some **generalisations** about wildlife that are illustrated by **facts** mentioned in the photo captions on pages 12 and 13.
2. Work in pairs to locate the facts in the article that best illustrate the general observations stated in the second column. Transfer the sentences from the article into the correct cell below. The fourth one has been done as an example.

Fact mentioned in the photo essay		General observation based on the fact
1.		The population size of some animals is dwindling because of factors such as loss of habitat.
2.		Even birds can express feelings such as curiosity about human behaviour.
3.		During winter, some wild animals have to work very hard for food. They may use complex, effective strategies to capture their prey.
4.	<i>The trapdoor spider waits in its burrow for its prey, and then shoots out like a bullet at the right time.</i>	Animals learn to expend the least amount of energy while searching efficiently for food.
5.		Animals have adaptations to protect themselves from predators and increase their chances of survival.
