

Thrift in My Life

An extension of "Giving materials new lives with 'thrifty' design"

In "Giving materials new lives with 'thrifty' design" (page 20–21, *What's Up* September 2018), the writer describes how some industries are reusing materials to create new products. You can do the same by reusing items from your everyday life!

Instructions

1. Form a group of four to six members. Together, decide on a product you want to make.
2. Discuss the materials that you need and how you can get them from items you already have. Use the checklist on the right to guide you.
3. Then, work out what you need to do to turn materials into the product. Use the flowchart on the left to guide you.
4. Put your plan into action and see if it works.

Our product:	
	Materials we need <i>(e.g. use old notebook for paper)</i>
