

## Humans in the year 10,000

*An activity of "The Bajau people's amazing adaptation to the seas"*

Read "The **Bajau people's amazing adaptation to the seas**" (page 14, *What's Up* March 2019)

Imagine it is the year 10,000. All the icebergs have melted and the sea levels have risen dramatically. As a result, many parts of the world are now under water. Even cities are underwater, or at least closer to the shore than before.

Humans have adapted to live in these conditions. Their bodies and internal organs have changed so that they can survive in water. What do you think some of these changes might be? Based on what you have learned from the article, draw and label what you think the human body in year 10,000 might look like.
