

## Protect Your Ears: An Infographic

*An activity of "Control the volume, say health experts"*

1. Read "**Control the volume, say health experts**" (page 20, *What's Up* February 2020).  
In pairs, discuss your responses to the article.

- What new information have you learned?
- How does it make you feel?
- What are some ways you can spread the message?

Unlike you and your classmates, there are many people out there who are unaware about unsafe volume levels and how they can damage your hearing forever.

2. With your partner, create an infographic, diagram or annotated picture to educate viewers about safe volume levels, and provide tips on how we can protect our ears.

Make sure that your work is attention-grabbing and easy to understand. Try to represent key information in the article to show your viewer how serious the situation is.

Use the space below to brainstorm, or to sketch a draft of your poster.

3. When you are ready, begin work on a fresh piece of A3 or A4 paper.
