If Clouds Could Speak

An activity of "Why are skies not blue?"

"Why are skies not blue?" (*What's Up* May 2020) explains scientifically why some planets' skies are not blue. It is very important to be correct when claiming that these are real facts. We don't always have to be factual though. With fiction, you can make believe all you want to. For example, take the clouds in the sky. What if clouds had personalities and could speak to one another? What might they talk about?

1. Fill in the speech bubbles with words that you imagine these two clouds are saying to each other.

2. In this space, draw any two clouds that you see in the sky. Then, pretend that they are chatting with each other. Use speech bubbles to capture their dialogue here.
