

## Celebrate International Day of Forests!

*An activity of "Refugees help restore a forest"*

Read "Refugees help restore a forest" (page 7, *What's Up* February 2022). Then, do this two-part activity to celebrate the International Day of Friendship (21 March).

### STEP A: ABOUT REFORESTATION

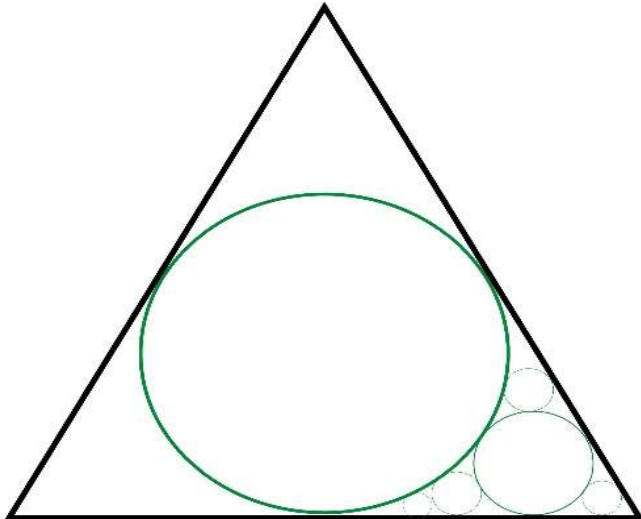

1) Based on what you have read in the *What's Up* story, list the before-and-after effects of reforestation in the table below:

The Effects of Reforestation	
Before Reforestation	After Reforestation

### STEP B: ABOUT CIRCLES

2) How many circles do you think can fit in this triangle?

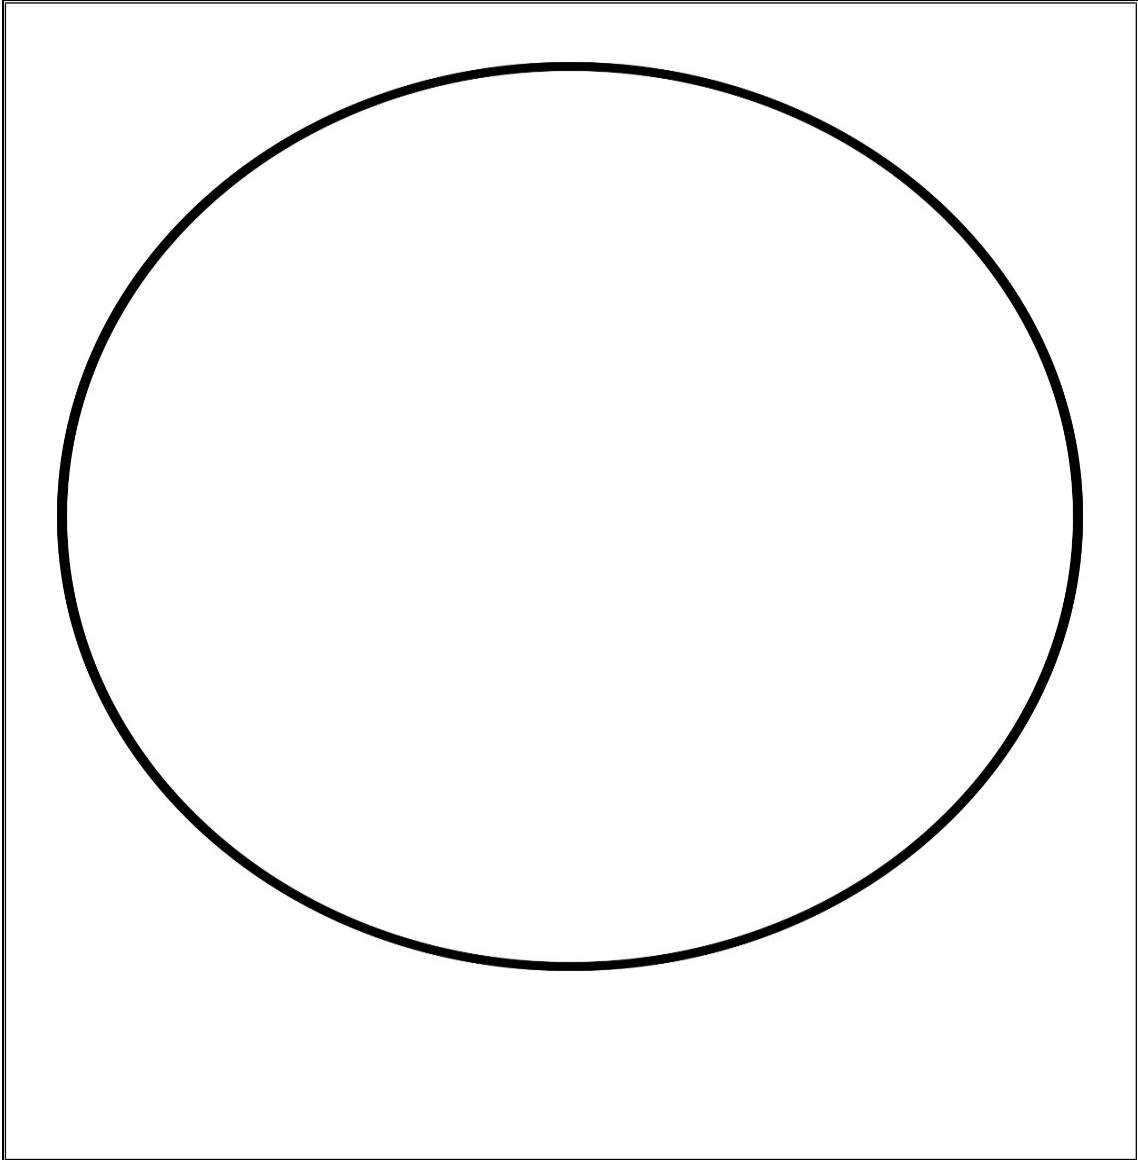

Try squeezing in as many as you can.

Answer: Infinite

### STEP C: MAKE A POSTER

3) Yes! We can fit an infinite number of circles in a finite space. Let's try it on another finite space. Fill the large circle with other circles of varying sizes. Continue by making more circles and having them touch each other. You can do this with the help of a compass or freehand.

4) Imagine the giant circle represents Earth while other circles represent trees, land, and water. Colour the circles with suitable tones i.e. greens for trees, blues for the waters, and browns for land.

5) Add in a suitable slogan below the Earth to create a poster for International Day of Forests.

6) Display your poster at home until 21 March to celebrate forests everywhere.
