Answering Queries

An activity of "Moo-ving to the water".

Have you ever seen a floating farm with cows in it? There is such a farm built on water in the Netherlands! Read "Moo-ving to the water" (page 18, *What's Up* August 2026).

IN GROUPS

- 1) Imagine that you and your group plans to set up a floating cattle farm in Singapore coastal waters. However, some members of the public do not like the idea of a cattle farm near them. They approach you with their queries and concerns. Write the answer to each one. Use the information in the *What's Up* story to help you.

Tips on answering queries:

- Listen attentively to the questions asked.
- Show empathy and understanding for the other person's views.
- Answer clearly and to the point.
- Use a positive tone.
- Focus on being helpful and constructive.

Member of the public (A): *The farm will only have two workers. That is not enough manpower to deal with the daily cow dung. With the farm so near us, won't the stink of manure waft through our neighbourhood?*

Answer: _____

Member of the public (B): *The farm will need water and power. Will that affect our neighbourhood's water supply and electricity?*

Answer: _____

Member of the public (C): *Why can't the farm simply be located on land? We still have unused land here in Singapore.*

Answer: _____

- 2) Present your group's responses to the class in the form of a skit.
